

WISE INVESTMENT LIMITED INCOME

Pershing

MONTHLY FACTSHEET

all data as at 30th April 2022

PORTFOLIO OBJECTIVES AND STRATEGY

The Wise Income Model Portfolio is designed for clients who are looking for a level of income plus capital growth in line with the MSCI PIMFA Growth index over a 5 to 10-year period. We aim to achieve this by investing in a select and focussed list of funds (unit trusts, investment trusts and OEICs), with diversification across geography, asset class and investment style. These funds invest in real assets, such as company shares (listed both in the UK and overseas), property, fixed interest and cash. The Portfolio aims to provide income of 3.5% or more per year. The Portfolio is invested mostly in 'medium' risk assets, such as shares and property, and can include up to 20% in 'high' risk assets such as shares in specific countries or industries. The Portfolio can also invest in 'lower' or 'minimal' risk assets such as fixed interest (UK government and higher quality company debt) and cash. We therefore consider the Portfolio to be suitable for those willing to adopt a medium risk profile.

PERFORMANCE SINCE LAUNCH (using month-end data)

CUMULATIVE PERFORMANCE

	1m	3m	6m	1yr	3yr	5yr	Launch
Wise Income Portfolio (P)	-0.2%	1.0%	1.8%	6.7%	12.6%	23.0%	67.0%
MSCI PIMFA Growth	-2.0%	-1.0%	-1.3%	4.6%	21.4%	37.5%	83.4%

DISCRETE ANNUAL PERFORMANCE

	30/04/2021	30/04/2020	30/04/2019	30/04/2018	30/04/2017
Wise Income Portfolio (P)	6.7%	21.3%	-13.0%	2.8%	6.3%
MSCI PIMFA Growth	4.6%	23.7%	-6.2%	6.3%	6.6%

All data used on this factsheet is supplied by Financial Express. Rounding may result in charts and tables not adding up to 100% in displayed data. Performance is based on total returns on a bid-to-bid basis, net of UK dividend tax credits and is calculated referencing a model portfolio. Actual portfolio statistics may differ because of investment performance, cash movements, transaction costs and the timing of sales and purchases within the portfolio. Quoted performance does not include fees levied by Wise Investments Ltd or any fees from custodial services. Service fees will apply. Past performance is not a reliable indicator of future results. This document should not be construed as an investment recommendation.

1 The Historic Yield is the weighted average yield of the model based on the model's current constituents

2 Volatility is the annualised monthly volatility of the model portfolio to the most recent month end over a 3 year period or since launch if this period is less than 3 years

3 The Model OCF calculates the annual charges levied by the underlying fund holdings according to the model portfolio weights

4 The Service Fee incorporates the model OCF, the standard non-tiered annual fees levied by Wise Investments Limited and custodian fees, of which this is the highest possible fee. Further details of these charges are disclosed to clients investing in the model portfolios.

PORTFOLIO MANAGEMENT

ROBERT BLINKHORN

Head of Investment
Management

Robert joined Wise Investment in July 2017 and has 20 years' experience in managing private client multi asset class portfolios. His main responsibility is the selection of suitable investments for portfolios and ensuring our investment service meets your requirements. Robert is a member of the CFA Society of the UK and has successfully passed the examinations for all three levels of the Chartered Financial Analyst qualification.

MONTHLY COMMENTARY

In April, global equities declined by almost 4% in sterling terms with US equity markets leading the fall. Technology companies have borne the brunt of investor selling this year as investors rotate away from large cap growth businesses. The trigger for the change in sentiment appears to be linked to interest rate policy changes and inflation (particularly commodity inflation) where more cyclical and asset heavy businesses in the Industrial sector along with Mining and Oil companies have led performance. Consequently, many of the sectors that have traded at a premium to what we, at Wise, believe to be reasonable value are now starting to look more palatable. The greater weighting of UK markets towards cyclical and commodity related businesses has meant that it has performed relatively well against other global equity markets. Again, although we would not regard equity markets as particularly cheap, the poor performance of global shares versus UK listed shares is causing us to reflect on our absolute and relative weightings in these markets in each of the portfolios.

In UK Commercial Property, listed securities were generally weaker whilst physical property funds delivered a low positive return. Open ended funds investing substantially in physical property are still awaiting the conclusions of a regulator review which may lead to a radical overhaul of the terms upon which investors can buy and sell units. Prospective returns from listed securities continue to look lacklustre according to our models with prices continuing to look marginally unattractive indicating a negative prospective total return.

Fixed interest was weaker with UK Government Index Linked Bonds leading the retreat. Although short term inflation expectations have remained robust, longer-term expectations softened slightly in April with yields rising across the index linked bond maturity range. The longer dated nature of UK Government issued inflation proofed debt means that their capital return is more susceptible to a given change in the market yield. Corporate debt was also unable to avoid losses in April caught by both rising government bond yields and a weakening sentiment towards credit. That said, the additional yield on corporate bonds in lieu of the extra risk relative to government bonds has moved back to more historical norms in the lower investment grade and upper high yield space, creating some potential value.

In the Income model portfolio, returns were higher by -0.2% in April significantly ahead of the MSCI PIMFA Growth index which returned -2%. Against the index, strong relative performance was achieved through an underweight position in global equities along with positive returns from the global equity funds held in a generally declining market. At an individual fund level, leading portfolio returns was Fidelity Moneybuilder Dividend and Evenlode Global Income. Both funds benefitted from exposure to the Consumer Goods sector via businesses such as Procter & Gamble, Reckitt Benckiser and Unilever.

In summary, there has been a significant rotation in equity markets this year which has acutely impacted overseas markets. Going into 2022, our view had been that equity prices had run too far and therefore had kept our overall equity exposure in the portfolios low (or zero, where appropriate). Although, we do not believe global equities currently represent incredible value, the pull back is making us reconsider this underweight position or at least the extent of it.

As first reported on the 30th of June 2020 factsheet commentary, generating income in current markets continues to be a challenge and the weighted average yield on the portfolio is currently running below the target yield. We continue to monitor this closely and to balance the demands of the yield target with the objective to achieve capital growth.

HOLDINGS

Security	Weight	OCF
TwentyFour Absolute Return Credit	12.9%	0.35%
BNY Mellon Real Return	13.9%	0.79%
BMO Property Growth & Income	2.5%	1.03%

JOHCM UK Equity Income	9.0%	0.67%
Trojan Income	9.5%	0.86%
TB Wise Multi-Asset Income	9.0%	0.69%
TB Evenlode Global Income	13.9%	0.55%
BNY Mellon Global Infrastructure Income	13.9%	0.81%
Cash	0.5%	0.00%

ASSET RISK

For Asset Risk Category definitions see the Wise Investment Risk Appendix, supplied to investors in the model portfolios.

ASSET ALLOCATION

IMPORTANT INFORMATION

Portfolio returns from the Wise Investment Model Portfolio Service will be subject to investment market fluctuations and there is no guarantee that the portfolio objectives, including any income targets, will be achieved. Where income is received as dividends, these will be automatically reinvested in the Model Portfolio, which may result in the Model Portfolio returns being higher than what a client portfolio can actually achieve. The performance will be reduced by the withdrawal of income and the impact of the ongoing charges and portfolio transaction costs. The charges can vary. Prices of funds and the income from them may fall as well as rise and investors may not get back the amount originally invested. Consequently, an investment into this portfolio should be considered for a 5 to 10 year period. The funds may invest in higher-yielding or non-investment grade bonds. The funds may hold investments denominated in currencies other than sterling. Changes in exchange rates will cause the value of these investments and the income from them to rise or fall. The funds can use derivatives for investment purposes. These instruments can be more volatile than investment in equities or bonds. Every effort is taken to ensure the accuracy of the data used in this document, but no warranties are given. Wise Investment has expressed its own views and these may change. The data contained in this document has been sourced by Wise Investment and should be independently verified before further publication or use.
